

F	DOCUMENTATION				
1	The principle in nursing documentation is to write down what has been done and not do what has not been written down				
2	Documentation of each stage of the nursing process is written clearly, concisely, and legibly				
3	I include the clear name, date, and time of each nursing action				
4	Documentation of the nursing process in the room using a standard format according to hospital guidelines				
5	Every time a record is continued on a new page, the nurse still provides identity, such as a clear name and signature.
